Class 07: Characters and Strings

Held: Tuesday, 5 September 2006

Summary: Today we consider two of Scheme’s core data types: Characters and strings.

Related Pages:
- EBoard.
- Lab: Characters and Strings.
- Reading: Characters in Scheme and Strings in Scheme.

Due
- HW3.

Assignments
- HW4.

Notes:
- Pairs continue from yesterday.
- More extra credit this week: Tuesday extra (Today 12:45-2:00 p.m. in Science 2424), Convo (11-noon, Thursday, Herrick).

Overview:
- Additional lessons from yesterday.
- Short introduction to strings.
- Lab.

Lessons from Yesterday
- Think about the arrangement of windows on the screen.
- Think about how you interact with DrScheme. There are a variety of techniques in use, and you might find that a different one does better for you.
  - Type the expressions in the bottom window and look at results.

```
> (real? 3/4)
#t
> (rational? 3/4)
#t
```

- Type the expressions in the top window, click "Run", and look at results.
(real? 3/4)
(rational? 3/4)
RUN
#t
#t

- Name the expressions in the top window, click "Run", and query results

(define ex1a (real? 3/4))
(define ex1b (rational? 3/4))
RUN
> ex1a
#t
> ex1b
#t

- Intersperse symbols that indicate what you’re computing

'is-three-fours-real?
(real? 3/4)
'is-three-fours-rational?
(rational? 3/4)
RUN
is-three-fours-real?
#t
is-three-fours-rational?
#t

- Think about how you explore procedures. If you are exploring a numeric procedure, you should certainly try:
  - Different numbers of arguments.
  - Both positive and negative arguments.
  - Both exact and inexact arguments.
  - Real, rational, and complex arguments.

**Characters and Strings**

- Characters: The building blocks of strings
- Strings: Collections of characters
- Together: The basics types for input and output in Scheme

**Lab**

- Do as much of the lab as you can.
- Be prepared to reflect.
