Review
Notes about Exam
Important Concepts

• Information hiding
  – Visibility of fields and methods

• Exceptions
  – Give information about the cause and place of an error

• Eclipse
  – Integrate coding, compiling, and debugging
Important Concepts (cont.)

• Inheritance
  – Own fields and methods of another class
  – Polymorphism (method overriding)

• Genericity
  – Implementation is independent of data type

• Data structures
  – LinkedList, stacks, queues, priority queues, maps
Important Concepts (cont.)

• Hashing
  – Store items with hash functions

• Sorting algorithms
  – Quick sort, merge sort, heap sort

• Graphs
  – Shortest-path problems
  – Minimum spanning tree problems
Exam

• Topics NOT covered in the exam
  – Java virtual machine
  – Eclipse
  – Version control
  – Assertions and loop invariants
  – Implementing sets and maps with balanced trees
  – Generic methods and classes
  – Array-Lists, Iterators, Comparators, and Collections
Exam (cont.)

• Quicksort and mergesort
• Doubly-linked lists and circular lists
• Comments and Documentation
• Random-Number Generation
• Treesort
• The Bellman–Ford Algorithm
Notes

• Big-O notation
  ▪ The running time of basic data structures (Chapter 6)

• Study questions

• Know how algorithms work

• Questions
  ▪ Multiple choice, true/false, short answers, draw figures
