

Class 45: Higher Order Procedures

Held: Monday, 26 November 2007

Summary: We visit the topic of *higher-order procedures*, one of the most important techniques in languages like Scheme. Higher-order procedures are procedures, like `map`, that take other procedures as parameters, return other procedures as values, or both.

Related Pages:

- Reading: Higher-Order Procedures.

Notes:

- Advance warning: Exam 3 will be distributed on Friday.
- Are there questions on the project?
- Reading for Tuesday: Searching.
- A few of you have asked about the final. Since our class overlaps with both the MWF 10:00-10:50 time and the TuTh 10:00-10:50 time, we can have a final at either 9:00 a.m. on Friday, 21 December 2007 or 2:00 p.m. on Wednesday, 19 December 2007. I expect that most of you would prefer the Wednesday time to the Friday time. I will be available for both (with different versions of the exam). You may also take the exam during the other section's time, 2:00 p.m. on Tuesday, 18 December 2007. If none of those times work, talk to me.

Overview:

- Procedures as parameters.
- Procedures as return values.
- Writing `map`.
- Writing `all?`.
