

Class 21: Transforming Images

Held: Tuesday, 26 February 2008

Summary: Today we consider some basic control structures that will allow us to write more general image filters.

Related Pages:

- EBoard.
- Lab: Transforming Images.
- Reading: Transforming Images.

Notes:

- My kids have yet another delayed school start. I hope Dr. Davis will be taking the class. Otherwise, Max is in charge.
- I've received one general question on Assignment 5: "In the questions where we render spots, do you care if the spots are clipped? (As in we can make the spot appear on the canvas, but part of it may be off the canvas without getting an error.)" I do not care if the spots are clipped. I care that you avoid the error message. (I also care that you render spots/partial spots either in the correct location or not at all. Moving everything to a valid location would be inappropriate.)
- I should be around this afternoon from 1:15-2:45 or so.
- Tomorrow's reading: Building Images by Iterating Positions.

Overview:

- Review: Transforming colors.
- Transforming images by transforming each pixel.
- Sequencing transformations with compose.
