

Class 22: Iterating Over Positions

Held: Wednesday, 27 February 2008

Summary: We consider a simple approach to working with images - looping over the positions in an image and computing a new color based on positional information. We then explore some applications of this approach.

Notes:

- I've put a new version of DrFu for the Mac on the DrFu web site. This one handles the pixel functions correctly (or so I think).
- Today's lab has a hint on how to more safely create new images.
- Today's lab may also be a bit long.

Overview:

- Iterating over positions.
- Blends and other positionally-computed images.
- Drawing simple shapes.
