What Brought Us Together?

- Three possible dimensions of consideration in CS education, beyond the issue of “what we teach”: 
What Brought Us Together?

Three possible dimension of consideration in CS education, beyond the issue of “what we teach”:

1. How we teach
What Brought Us Together?

Three possible dimension of consideration in CS education, beyond the issue of “what we teach”:

1. How we teach
2. How we measure students’ learning
Three possible dimensions of consideration in CS education, beyond the issue of “what we teach”:

1. How we teach
2. How we measure students’ learning
3. How we understand attitudinal factors
   - Attitudinal factors = student expectations + assumptions + beliefs
What Brought Us Together?

Three possible dimension of consideration in CS education, beyond the issue of “what we teach”:

1. How we teach
2. How we measure students’ learning
3. How we understand attitudinal factors
   Attitudinal factors = student expectations + assumptions + beliefs

Regarding 1, the TOC of the proceedings of any SIGCSE, ITICSE, etc, will show how active CS educators have been on this front
Three possible dimension of consideration in CS education, beyond the issue of “what we teach”:

1. How we teach
2. How we measure students’ learning
3. How we understand attitudinal factors
   
   Attitudinal factors = student expectations + assumptions + beliefs

Regarding 1, the TOC of the proceedings of any SIGCSE, ITICSE, etc, will show how active CS educators have been on this front.

Regarding 2 and 3, there is ongoing work, as well as parallels to be noted with what has been done in Physics education.
What Brought Us Together?

A sense of responsibility:

“Introductory courses generally represent a blend of elements”

- “practice with problem solving,”
- “coverage of technical elements and details,”
- “preparation for later courses,”
- “overview of the scope of the discipline”
- “connections with one or more application areas,”
- “identification of social and ethical issues of computing,”
- “clarification of what it means to be a computing professional,”
- “shaping of attitudes/perspectives on the computing discipline.”

“Students often enter college with pre-conceived notions of what the field of computing entails, and unfortunately many of these images are misguided” - Henry
What Will Be The Focus of the Panelists?

**Henry Walker** will create the appropriate context and consider the role of attitudinal studies of students as they progress through a computing curriculum.
What Will Be The Focus of the Panelists?

**Henry Walker** will create the appropriate context and consider the role of attitudinal studies of students as they progress through a computing curriculum.

**Mark Guzdial** will discuss the road educators have travelled in creating such instruments.
What Will Be The Focus of the Panelists?

**Henry Walker** will create the appropriate context and consider the role of attitudinal studies of students as they progress through a computing curriculum.

**Mark Guzdial** will discuss the road educators have travelled in creating such instruments.

**Ali Erkan** will review a survey instrument developed by the University of Maryland Physics Education Research Group.
What Will Be The Focus of the Panelists?

**Henry Walker** will create the appropriate context and consider the role of attitudinal studies of students as they progress through a computing curriculum.

**Mark Guzdial** will discuss the road educators have travelled in creating such instruments.

**Ali Erkan** will review a survey instrument developed by the University of Maryland Physics Education Research Group.

**Steve Cooper** will present the importance of gathering this information for curriculum design from the perspective of grant agencies.
What Will Be The Activities of This Session?

Survey: We will ask the participants to fill out a CS version of the MPEX survey.
What Will Be The Activities of This Session?

Survey: We will ask the participants to fill out a CS version of the MPEX survey.

Discussion: We will open it up for Q&A and discussion.
Individual Statements

- Henry Walker
- Mark Guzdial
- Ali Erkan
- Steve Cooper
Instructions for the MPEX Survey (For Students)

The statements may or may not describe your beliefs about this course. You are asked to rate each statement by circling one of five choices

1: Strongly Disagree  
2: Disagree  
3: Neutral  
4: Agree  
5: Strongly Agree

- Work quickly. Don’t over-elaborate the meaning of each statement. They are meant to be taken as straightforward and simple.
- If you don’t understand a statement, leave it blank.
- If you understand, but have no strong opinion, circle 3.
- If an item combines two statements and you disagree with either one, choose 1 or 2.
